

100m fiber optic cable with gigabit wireless router

AI Overview

You can use a 100-meter fiber optic cable with a gigabit wireless router, but the wired network speed will be limited by your 100M broadband, while wireless performance can improve with a gigabit router.

Fiber Cable Options For a 100-meter connection, OM4 multimode fiber cables are ideal, supporting high-speed data up to 100 meters at 850 nm. Products like the Tripp Lite 100m OM4 LC/LC duplex fiber cable provide durability with armored protection and low insertion loss, suitable for indoor or outdoor use. Pre-terminated cables simplify installation, allowing you to plug directly into compatible devices without splicing.

Connecting Fiber to a Router Fiber internet requires an Optical Network Terminal (ONT), which converts the fiber signal into Ethernet. To connect your router: Plug the fiber optic cable into the ONT. Use an Ethernet cable to connect the ONT's LAN port to your router's Gigabit WAN port. Power on the router and configure settings via the admin panel if needed. Most modern routers, including Wi-Fi 6 or 6E models, are compatible with fiber connections as long as they have a gigabit WAN port.

Router Performance with 100M Fiber

Wired network: Even with a gigabit router, the maximum wired speed is capped by your 100M broadband, typically around 90 Mbps due to port and device limitations.

Wireless network: Upgrading to a gigabit router can significantly improve Wi-Fi speeds, especially for mobile devices. Dual-band or tri-band routers supporting 802.11ac/ax can deliver higher throughput and better coverage.

Recommended Routers For optimal performance with fiber:

- Netgear Nighthawk RS700S Wi-Fi 7: High-speed Wi-Fi, multiple gigabit ports, LAN aggregation support.
- TP-Link AX5400 Wi-Fi 6 Router (Archer AX72 Pro): Dual-band, 2.5 Gbps Ethernet port, strong coverage.
- Netgear Nighthawk RAXE500 Wi-Fi 6E: Tri-band, supports multiple devices, good fo...
