

# 200A Level 3 Distribution Box

## AI Overview

A 200A Level 3 distribution box is a high-capacity electrical distribution unit designed for robust, safe, and flexible power management in industrial, construction, or temporary power applications.

**Key Features**

- Rated Current:** 200A, suitable for heavy-duty applications and capable of handling multiple outgoing circuits simultaneously.
- Construction:** Many models, such as the Bos Elektro Midi series, feature solid rubber housings for impact and shock resistance, combined with hot-dip galvanized steel frames for durability and rust-free performance.
- Sockets and Protection:** Typical configurations include multiple flush-mounted sockets (e.g., 125A and 32A) protected by thermal-magnetic circuit breakers or RCCBs, ensuring safety against overloads and residual currents.
- Compliance:** Built according to European Standard EN 61439-4, guaranteeing safe operation under full load and high voltage conditions.
- Serviceability:** Sockets can often be replaced externally without opening the box, minimizing downtime and enhancing safety during maintenance.
- Applications:** Suitable for construction sites, industrial facilities, temporary power supply setups, and outdoor environments due to robust materials and weather-resistant design.
- Variants and Options**
  - TPN Type B Distribution Boards:** Available with 4–24 outgoing ways, compatible with 200A main switches, allowing flexible circuit configurations.
  - Power Distribution Blocks:** Devices like the Schneider Electric Linergy FM 4P provide 200A rated current with high impulse withstand voltage (8kV), ideal for feeder-type applications.
  - ABC Distribution Boxes:** Pole or wall-mountable units for aerial bundled conductor systems, supporting up to 9 service cables and UV-resistant housings.
- Advantages**
  - High Capacity:** Can manage multiple circuits and high current loads efficiently.
  - Durability:** Resistant to mechanical impact, corrosion, and outdoor conditions.
  - Safety:** Integrated circuit protection, compliance with international standards, and external serviceability reduce risk during operation.
  - Flexibility:** Suitable for various power management needs.
