

A well-known electrical distribution box in Tanzania

AI Overview

In Tanzania, commonly used electrical distribution boxes include plastic and metal MCB distribution boxes, cable branch boxes, and industrial CEE distribution boxes for residential, commercial, and industrial applications.

Types of Distribution Boxes

- 1. Plastic MCB Distribution Boxes** These are widely used in residential and small commercial installations. They are typically made from durable plastic and house miniature circuit breakers (MCBs) for single-phase or three-phase systems. A popular model is the TAIXI PZ30, compatible with Merlin Gerin MCBs, suitable for single-phase two-wire or four-wire connections, providing protection and control for low-voltage circuits.
- 2. Metal Sheet Steel Distribution Boxes** Used in larger commercial or industrial setups, these boxes are made from 1.2–1.5mm sheet steel with mounting plates of 2.0mm steel, finished with thermosetting epoxy polyester powder for durability. They can accommodate multiple MCBs, RCDs, and sockets, and are suitable for wall-mounted or cabinet installations.
- 3. Cable Branch Boxes** These boxes are installed at cable nodes to distribute electrical energy between high and low voltage systems. They are designed for easy maintenance and secure cable connections, often used in industrial or utility applications.
- 4. CEE Industrial Distribution Boxes** These are heavy-duty boxes for industrial use, often wall-mounted or mobile, featuring multiple CEE sockets (16A, 2P+E, 220V) and integrated RCDs and MCBs. They are suitable for construction sites, factories, and outdoor applications.
- 5. Fiber Optical Distribution Boxes** Although primarily for telecommunications, these boxes are used in networked electrical systems for connecting optical fibers. They come in 1U or 2U sizes, supporting up to 48 ports, and are made from metal for durability.

Materials and Construction Plastic: Lightweight, corrosion-resistant, suitable for residential and small commercial use.
