

AI Server H2O General Agent

Overview

Enterprise h2oGPTE agents are general-purpose, code-first AI agents. They pick tools, write code, run it, fix errors, and keep iterating until they finish the task. Unlike frameworks such as LangGraph or CrewAI, where each agent targets one specific workflow, an H2O agent isn't tied to a playbook. H2O Super Agent combines generative reasoning, predictive intelligence, and multi-agent orchestration with NVIDIA Run:ai and NVIDIA AI-Q agent architectures to power long-horizon enterprise AI systems. ai, the #1 Agentic AI company, announced its h2oGPTE Agent has once again achieved the top ranking on the prestigious General AI. h2ogpte is the Python client library for H2O. ai's h2oGPTE, a RAG (Retrieval-Augmented Generation) based platform built on top of open-source software components such as h2oGPT, hnswlib, Torch, Transformers, Golang, Python, k8s, Docker, PyMuPDF, DocTR, and many more. h2oGPTE is designed to help. H2O.
