

Airport cable tray installation height

Overview

When vertically installed, the height of cable trays from the ground should not be lower than 1. If the above standards cannot be met, metal covers must be added for protection. The selection of the matching cable tray. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. At Elcon Global, we focus on designing and installing electrical cable trays for airports, improving safety, durability and efficiency for these mass transit operations. Avoiding Electrical Dangers Airports contain a variety of high-priority assets such as overhead power lines, communication. All rights, including translation into other languages, reserved under the Universal Copyright Convention, the Berne Convention for the Protection of Literary and Artistic Works, and the International and Pan American copyright conventions. All tray sections will support an additional 200 lb concentrated load on any portion of tray (side rail, rung, etc).
