

Belize Cable Tray Specifications and Models

AI Overview

Belize offers a wide range of cable tray models including ladder, perforated, solid-bottom, and wire mesh trays in materials like galvanized steel, stainless steel, aluminum, and fiberglass.

Common Cable Tray Models in Belize

- Ladder Type Cable Trays** Consist of two side rails with rungs connecting them. Provide maximum ventilation for heat-producing cables such as power lines. Suitable for high-voltage, power distribution, and industrial wiring applications.
- Perforated Cable Trays** Fabricated from continuous roll-formed steel with perforations on both sides. Offer protection from physical damage while allowing airflow to prevent overheating. Available in pre-galvanized, painted, hot-dip galvanized, or powder-coated finishes.
- Solid-Bottom Cable Trays / Raceways** Enclosed trays made from single metal sheets. Protect cables from heat, humidity, corrosion, and water intrusion. Ideal for sensitive control wiring, telecom, and optical cables.
- Wire Mesh / Basket Trays** Open design made from welded or woven metal wires. Lightweight, flexible, and easy to cut or shape for custom installations. Provides excellent ventilation and visibility, commonly used in construction, mining, and industrial sectors.
- Channel and One-Piece Trays** Channel trays are U-shaped or C-shaped for routing cables along walls or ceilings. One-piece trays offer robust support for heavy-duty applications and long cable runs.

Materials Used

- Galvanized Steel** – corrosion-resistant and durable.
- Stainless Steel** – ideal for harsh environments.
- Aluminum** – lightweight and easy to install.
- Fiberglass** – non-conductive and resistant to chemicals.

Key Features

- Easy installation and maintenance.
- Enhanced cable protection and safety.
- Improved airflow and cooling for heat-sensitive cables.
- Customizable sizes, shapes, and configurations to meet project requirements.
