

Color composed of 12 pigtails

AI Overview

A 12-fiber pigtail set consists of 12 individual fibers, each with a distinct color following the DIN VDE 0888 standard: red, green, blue, yellow, white, grey, brown, violet, turquoise, black, orange, and pink. Overview A 12-fiber color-coded pigtail is a fiber optic cable assembly with 12 individual fibers, each pre-terminated with a connector on one end and exposed fiber on the other for fusion splicing to a trunk cable. These pigtails are used in telecom networks, data centers, and high-density fiber applications to ensure organized and efficient fiber management. Color Coding The 12 fibers are color-coded according to the DIN VDE 0888 standard: Red, Green, Blue, Yellow, White, Grey, Brown, Violet, Turquoise, Black, Orange, Pink. The outer jacket color of each fiber matches the inner 250µm buffer, making identification easier during installation. Fiber Types and Connectors 12-fiber pigtails are available in: Singlemode (OS2 9/125) or Multimode (OM1, OM2, OM3, OM4, OM5) fibers. Connector types: SC, LC, FC, ST. Polish types: UPC or APC. High-quality zirconia ceramic ferrules are used to ensure low insertion loss and good repeatability. Features Tight or tight-buffered fiber construction. Flame-retardant, rugged outer jacket. Low attenuation and minimal return loss. Available in individual pigtails, 6-packs, or 12-packs. Suitable for high-density applications; outer jacket can be removed for tighter bend radius. Applications 12-fiber color-coded pigtails are widely used in: Telecommunication networks, Data centers and server rooms, Fiber-to-the-home (FTTH) deployments, High-density patch panels and distribution frames. They provide organized fiber management, simplify splicing, and reduce errors during installation.
