

# Cost of drilling cable tray holes

## AI Overview

The cost of drilling holes for cable tray fixing typically ranges from \$5 to \$20 per hole, depending on material, hole size, and labor complexity. Factors Affecting Cost

**Material Type:** Drilling through concrete, brick, or precast elements is more expensive than drilling through drywall or light metal supports due to the need for specialized tools like diamond-tipped drill bits or core drills ( ).

**Hole Size and Depth:** Larger diameter holes or deeper penetrations require more time and specialized equipment, increasing the cost ( ).

**Labor and Skill:** Skilled electricians or M&E contractors may charge higher rates for precise drilling, especially when fire-rated walls or structural elements are involved ( ).

**Fire Safety and Compliance:** If drilling penetrates fire-resisting walls or floors, additional sealing and fire-stopping measures are required, which adds to the overall cost ( ).

**Location and Accessibility:** Ceiling-mounted or hard-to-reach areas may require scaffolding or lifts, increasing labor costs ( ).

**Typical Cost Estimates**

- Standard wall or floor penetration in commercial buildings: \$5–\$10 per hole for small to medium diameters (up to 25–30 mm).
- Concrete or reinforced walls/floors: \$10–\$20 per hole, depending on thickness and reinforcement.
- Specialized drilling (diamond core, fire-rated walls): \$15–\$30 per hole, including fire-stopping and finishing ( ).

**Recommendations**

- Site Survey:** Conduct a technical visit to assess wall/floor type, hole size, and accessibility before finalizing a quote ( ).
- Use Templates and Jigs:** For field-cut cable trays, using splice plate templates or drill jigs ensures accurate hole placement and reduces labor time ( ).
- Include Ancillary Costs:** Factor in anchors, bolts, washers, and fire-sealing materials when budgeting. By considering these factors, you can obtain a more accurate estimate for drilling holes for cable tray fixing in your specific project.
