

# Grounding requirements for conduits entering the distribution box

## Overview

7 Provide conduit grounding bushings, bonded together and connected to the equipment enclosure on all incoming and outgoing conduits on distribution switchgear and switchboards, distribution panels and on all conduits over 1-1/4" diameter at all panelboards . 1. 2 Clamps and continuity devices shall be non-ferrous material, UL approved. Connections to ground rods and all. The National Electrical Code (NEC) governs electrical junction box rules. These rules define when you must install a box, how large it must be, how you must install it, and how inspectors evaluate compliance. Article 314 applies to: These. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical insights into proper grounding techniques, with a special focus on how selecting quality materials from a reliable building material supplier impacts your entire system's safety and longevity. These are minimum requirements and do not replace federal, state, local, or other applicable codes, laws, or regulations, which may have priority.

### GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

3. CONSTRUCTION REQUIREMENTS 1.7 Provide conduit grounding bushings, bonded together and connected to the equipment enclosure on all incoming and outgoing conduits on distribution

### UNDERGROUND CONDUIT SYSTEMS

Closed Conduit Design: A closed conduit design consists of conduit in a trench terminating in a vault. All 600-ampere (A) systems require a closed conduit design. 200 A systems may require closed conduit

This section includes requirements for horizontal and building backbone raceways, fittings, and boxes specific to communications circuits (cabling) for voice and data. Related Sections: Division 26

### DUKE UNIVERSITY CONSTRUCTION STANDARDS 1

All service entrances shall be solidly grounded using a grounding electrode system connection between ground rods, building steel and metallic cold-water piping.

## Communications Distribution System Requirements

The metallic sheath of communications cables entering buildings shall be bonded to ground as close as practicable to the point of entrance. See NEC Article 805, "Communications Circuits".

## Grounding and Bonding — Part 1 of 3

Clarifies the rules for bonding jumpers installed in a raceway versus those installed outside a raceway. Adds provisions for protecting aluminum bonding jumpers against corrosion.

## GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

Connect the conductor from the panel ground bus or connector at the source to all items to which the conduits or raceways connect. Bond to a ground lug within each panel, box or equipment.

## A Complete Guide to NEC Article 314 on Electrical Boxes and Conduit

Regardless of the wiring method, box fill calculations apply equally to all cables. Use our conduit fill calculator to determine the calculation in your specific case.

## General Requirements for Wiring Methods in the NEC

Within Chapter 3 of the NEC is Article 300. This article is essentially a catchall for wiring methods not covered in each specific article within Chapter 3.
