

Guanglida Settlement Module

AI Overview

There is no specific product called "Guanglida Settlement Module"; the term may refer either to a software settlement module or to products from Guanglida Machinery.

Context 1: Guanglida Machinery Shandong Guanglida Machinery Technology Co., LTD, also known as Rizhao Guanglida Industry and Trade Co., Ltd., is a Chinese manufacturer specializing in high-strength fasteners and custom forgings. Their products range from 1/2 inch to 20 inches in diameter and 1/2 to 10,000 lbs in weight, serving industries such as heavy construction, oil & gas, renewable energy, and hydropower. The company is ISO 9001:2015 and IATF 16949 certified, with capabilities in CNC turning, milling, thread rolling, drilling, tapping, and assembly, allowing them to produce both internally and externally threaded components at the same facility.

Context 2: Settlement Module in Software In the software domain, a Settlement Module typically refers to a component of Oracle Utilities Market Settlements Management. This module is used for managing energy or utility market settlements, integrating with other Oracle Utilities products like Meter Data Management and Smart Grid Gateway. It handles batch processing of settlement data, user access control, and configuration of settlement rules and workflows. Users are generally restricted to those executing batch processes, and the module operates within the Oracle Utilities application framework.

Key Takeaways If your query relates to industrial products, "Guanglida" refers to the machinery and fastener manufacturer, not a software module. If your query relates to software or energy market settlements, the "Settlement Module" is part of Oracle Utilities' suite and is unrelated to the Guanglida company. There is no publicly documented product combining both terms as a single "Guanglida Settlement Module." Understanding the context—industrial manufacturing versus software settlement—is essential to identify the correct reference.
