

How high are the waterproofing requirements for the inlet of the distribution box

Overview

Ingress Protection (IP) Rating: The junction box should have an IP65 rating or higher to protect against dust and water ingress. The inlet and outlet of weatherproof outlet box should be below the box of waterproof outdoor electrical box, not above the box of ip68 junction box. Adding protective sleeves and bundling cables correctly ensures system longevity and prevents hazardous electrical failures in industrial environments. According to industrial wiring. Seal an electrical enclosure by matching the IP/NEMA rating, using the right gasket, cable glands, sealant, and inspection steps to block dust, water, and corrosion. 9 Waterproofing and drainage measures should be taken for the cable mezzanines, cable trenches and cable rooms located below the outdoor floor of substations and power distribution stations ; waterproofing measures should also be taken for the cable inlets, outlets and cable protection pipes. □□
