

Maldives Drop Fiber Optic Cable G 657A1

Overview

FTTH Outdoor Drop Cable G657A1, G657B, G652D, single mold drop fiber optical cable. The fibers, 250 μ m, are positioned in a loose tube made of a high modulus plastic. The tubes are filled with a water-resistant filling compound. A Fiber Reinforced Plastic (FRP)/Steel wire locates in the center of core as a non-metallic strength member. The tubes (and fillers) are stranded around. ITU-T (International Telecommunication Union) defines several single-mode fiber standards, including G. Among these, commonly used standards are G. 657A1 fiber cores. Special low-bend-sensitivity fiber provides high bandwidth and excellent communication transmission property. Two parallel FRP strength members ensure good performance of crush resistance to protect the fiber, and reduces the weight of the fiber optic cable.
