

Metal conduit grounding of distribution box

Overview

26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. 7 Provide conduit grounding bushings, bonded together and connected to the equipment enclosure on all incoming and outgoing conduits on distribution switchgear and switchboards, distribution panels and on all conduits over 1-1/4" diameter at all panelboards, pull boxes and equipment. 8 Provide. The National Electrical Code® (NEC®) recognizes several types of conductors that are permitted to be used as equipment grounding conductors in Section 250. 118 (2), (3) and (4) respectively. 1. 2 Clamps and continuity devices shall be non-ferrous material, UL approved. This critical step. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system.
