

# Mexican large-core fiber G 652D

## Overview

652 fiber is designed to have a zero-dispersion wavelength near 1310 nm, therefore it is optimized for operation in the 1310nm band and can also operate at 1550 nm. A . ITU-T (International Telecommunication Union) defines several single-mode fiber standards, including G. This article intends to provide a clear explanation of G. 652 fiber is the most commonly used. This is the latest revision of a Recommendation that was first created in 1984 and deals with some relatively minor modifications. Both analogue and digital transmission can be used with this fibre. Whether it is a long-distance network, local network, or access network, it is the absolute protagonist, accounting for more than 95% of its overall. G.
