

New Zealand QSFP Optical Module NRZ

Overview

Add this QSFP module for distances up to 100 meters to your CCR2216, CRS504 or CRS518 setups and enjoy real speed and ultimate reliability. This optical module offers four independent full-duplex channels with up to 25 Gbps per channel bandwidth and an aggregate bandwidth of 100. QSFP-DD is a new module and cage/connector system similar to current QSFP, but with an additional row of contacts providing for an eight lane electrical interface. It is being developed by the QSFP-DD MSA as a key part of the industry's effort to enable high-speed. The Quad Small Form-Factor. With built-in Semtech Chip and equipped with individually designed BOX packaging, the QSFP28 transceiver offers high speed and low power in 100G links. The Quad Small Form-Factor. Cisco QSFP-DD and OSFP 800G ZR/ZR+ digital coherent optics modules enable 800G traffic over amplified Dense Wavelength-Division Multiplexing (DWDM) links up to 120 km for 800ZR and over 1000 km for 800G ZR+. It allows 400G speeds in a native 4-lane configuration, reducing the complexity of breakout cables required by early 400G QSFP-DD (8-lane) implementations. The QSFP-DD specification, maintained by the QSFP-DD.
