

Price List of Fireproof Cable Trays in Japan

AI Overview

Professional fireproof cable trays in Japan typically range from ¥10,000 to ¥50,000 per meter, depending on material, fire rating, and design. Price Overview The cost of fireproof cable trays in Japan varies widely based on material, type, and fire-resistance rating. Common materials include galvanized steel, stainless steel, aluminum, and fiberglass, with stainless steel offering superior fire and corrosion resistance, which increases the price. Standard ladder-type or perforated trays generally cost less, while enclosed or mineral-insulated (MI) trays designed for high-risk areas like server rooms or chemical plants are at the higher end of the range. Factors Affecting Price Material: Stainless steel and MI trays are more expensive than galvanized steel or aluminum. Fire Rating: Trays tested to UL 1724 or compliant with NFPA 70 standards may cost more due to certification and testing requirements. Tray Type: Ladder, mesh, U-shaped, or enclosed trays differ in manufacturing complexity and cost. Length and Size: Standard lengths are typically 2–2.5 meters; larger or custom sizes increase cost. Coatings and Finishes: Intumescent paints, powder coatings, or hot-dip galvanizing add to the price. Installation Features: Tool-free assembly, seismic supports, and vibration dampers can influence overall cost. Supplier Guidance Brilltech Engineers offers high-quality cable trays in Japan with options for galvanized steel, stainless steel, and fiberglass, and provides consultation for system design and installation support. Jiangsu Yanggang Electrical supplies fireproof steel cable trays meeting Japanese fire-resistance standards, suitable for industrial applications like chemical plants, hospitals, and power facilities. For accurate pricing, it is recommended to contact suppliers directly to request a quote based on your project's specifications, including tray type, length, material, and fire...
