

Price of Flame-Retardant Ladder Cable Trays in New Zealand

AI Overview

Flame-retardant ladder cable trays in New Zealand are available from multiple suppliers, with prices varying based on material, load rating, and fire-resistance specifications.

Overview of Available Products

Fire-rated ladder cable trays are designed to prevent the spread of flames and maintain cable integrity during a fire. In New Zealand, suppliers such as Treadwell Group, NewReach, and FDG offer a range of options:

- FRP (Fiberglass Reinforced Plastic) Cable Ladders:** Lightweight, fireproof, non-corrosive, and UV-resistant. Available in solid or ventilated trays with pre-assembled fittings for faster installation. Designed for long-term durability with a statistical design life of 50+ years (Treadwell Group).
- Metal Fire-Rated Cable Trays:** Made from powder-coated aluminum, galvanized steel, or stainless steel with intumescent coatings. These trays are engineered to withstand high temperatures, support standard cable loads, and comply with fire safety codes (NewReach).
- Customizable Options:** Many suppliers offer adjustable widths, depths, and load capacities, as well as accessories like bends, tees, reducers, and covers to suit specific project requirements.

Factors Affecting Price

The cost of flame-retardant ladder cable trays depends on several factors:

- Material:** FRP trays are generally more expensive than standard galvanized steel due to fireproofing and chemical resistance. Powder-coated or stainless steel trays with fire-rated coatings also command higher prices.
- Load Rating and Span:** Trays designed for heavier cable loads or longer support spans require more robust construction, increasing cost.
- Fire-Resistance Certification:** Products tested to meet fire safety standards (e.g., UL-classified or local compliance) may be priced higher.
- Accessories and Customization:** Pre-assembled fittings, covers, and specialized bends add to the overall cost.
