

Price of Nordic Communication Integrated Cabinet

AI Overview

The monthly price for a Nordic Communication Integrated Cabinet typically includes the cabinet itself and allocated power, with fees varying based on configuration and services. Nordic/Norden Smart Cabinets are designed for data centers, server rooms, and edge infrastructure, offering integrated power distribution, environmental monitoring, and access control. According to Nasdaq's co-location price list, monthly fees for cabinets include the enclosure and allocated maximum power, with additional services like remote hands available separately. Fees may be waived for cabinets used by the same client across multiple locations. Pricing depends on factors such as: Cabinet size and rack units, Power allocation (A+B circuits), Optional monitoring and environmental sensors, Remote hands or support services. While the Nasdaq price list does not provide a single fixed number for all configurations, typical monthly fees for integrated cabinets in co-location facilities can range from several hundred to over a thousand USD per month, depending on power and service levels. For precise pricing, it is recommended to contact Nasdaq or Norden Communication directly to obtain a quote tailored to your specific cabinet size, power requirements, and service options. Nordic Smart Cabinets also support modular expansion, integrated UPS, cooling, and emergency ventilation, which may influence the total cost if additional features are selected. This makes them suitable for enterprise branches, hospitals, schools, financial networks, and government departments seeking scalable, intelligent infrastructure.
