

Pricing for Electrical Distribution Box Processing

AI Overview

Electrical distribution box processing typically ranges from \$100 for small residential units to \$8,000 for high-capacity, outdoor, or customized industrial panels.

Residential Distribution Boxes For standard home installations, indoor panels with 100–125A capacity generally cost \$1,200–\$2,500, including parts and labor, while 200A outdoor upgrades with new meter sockets can reach \$3,000–\$6,000 depending on complexity and location. Basic units are usually single-phase, surface-mounted, and include standard circuit breakers, whereas higher-end units may feature smart meters, surge protection, and weatherproof enclosures.

Commercial and Industrial Units Commercial and industrial distribution boxes are more expensive due to higher amperage, three-phase systems, and advanced control features. Prices vary widely based on specifications, material quality, and customization. Small distribution boxes for light industrial use range from \$100–\$500 per unit, depending on amperage (32A–125A), number of circuits, and IP ratings. Larger modular cabinets, switchgear, or custom OEM enclosures can cost several thousand dollars per unit, especially when including smart monitoring, remote control, or integration with building management systems.

Factors Affecting Price

- Amperage and number of circuits:** Higher capacity panels cost more.
- Material and construction:** Metal enclosures are more durable and expensive than thermoplastic.
- Installation complexity:** Outdoor units, long conduit runs, or structural modifications increase labor costs.
- Safety and compliance features:** Surge protection, RCDs, and code compliance add to the price.
- Customization:** OEM branding, modular designs, and specialized mounting or labeling can significantly increase costs.
- Location and labor rates:** Urban areas or regions with higher permit fees may see 5–15% higher costs.

Summary Small residential units: \$100–\$500 (par...
