

Remote power supply network cable

Overview

By utilizing a PoE switch or injector, power can be delivered to the network switch through the Ethernet cable, eliminating the need for a separate power supply. This not only streamlines the setup process but also enhances the flexibility of network deployments. Corning's Long-Reach Solutions offer cost-effective, reliable, and scalable long distance connectivity that can enable the deployment of complex technologies across campuses. A separate power supply is not necessary. However, it can still damage equipment that has not been designed to receive. Shop DigiKey's large in-stock selection of Power over Ethernet (PoE). Belden's Application-Based RemoteIP Cables take an IEEE-standards-based approach to solving real-world problems in applications where Category cabling falls short.
