

Tonga butterfly optical cable price quote

AI Overview

Butterfly optical cables typically range from \$0.03 to \$26.8 per unit, depending on specifications and quantity. The cost of Tonga butterfly optical cables depends on several factors, including fiber type, sheath material, length, and bulk order quantity. For example, wholesale butterfly fiber optic cables with a 9/125 LSZH sheath are available from \$0.03 to \$26.8 per unit, with bulk orders starting from 5 units, making them suitable for FTTH and data center applications (Alibaba). Factors influencing cost include:

- Cable type and fiber standard:** Single-mode fibers like ITU-T G.657A1 or G.657A2 are commonly used for FTTH installations, which can slightly increase the price due to higher performance and low bending loss (Hongant Group).
- Sheath material:** LSZH (Low Smoke Zero Halogen) jackets are standard for indoor and short-distance outdoor use, offering safety and durability, which can affect pricing.
- Installation ease:** Butterfly cables are lightweight and easy to install, reducing labor costs, which contributes to overall cost-effectiveness for both residential and commercial deployments (Jiangsu Hawell).
- Cable length and armoring:** Longer cables or armored versions for outdoor use may cost more due to additional materials and protection (Briticom).

For residential FTTH installations, butterfly cables are considered cost-effective because their simple structure and lightweight design reduce both material and labor costs, making them an attractive option for service providers and homeowners alike. In summary, while exact Tonga-specific pricing may vary depending on suppliers and shipping, you can expect butterfly optical cables to cost anywhere from a few cents to around \$27 per unit, with bulk purchases generally offering lower per-unit prices.
