

Unit price for constructing a power distribution box

AI Overview

The unit price for a power distribution box typically ranges from \$100 to several thousand dollars, depending on type, capacity, and features.

Price Range and Factors

The cost of constructing a power distribution box varies widely based on several factors:

- Type of Box:** AC or DC, low-voltage or high-voltage, and industrial or residential use all affect pricing. For example, intelligent AC/DC distribution boxes with remote monitoring and control capabilities are more expensive than basic low-voltage boxes.
- Capacity and Configuration:** Boxes with higher amperage ratings, multiple phases, or more circuit breakers cost more. For instance, a 32A 3-phase distribution box with multiple MCBs may start around £100 in the UK, excluding VAT and shipping.
- Materials and Build Quality:** Enclosures made from thermoplastic, steel, or stainless steel differ in cost. Robust, weather-resistant boxes suitable for outdoor or industrial use are priced higher.
- Smart Features:** Integration with IoT platforms, remote terminal units (RTUs), or SCADA systems increases the unit price due to added electronics and software.
- Supplier and Region:** Factory-direct prices from manufacturers in China or Europe may be lower than retail or local distributors. Shipping, import duties, and local taxes also influence the final cost.

Example Pricing

- Basic portable distribution boxes: \$100–\$300 per unit for small single-phase or low-capacity units.
- Industrial AC/DC intelligent boxes: \$500–\$2,000+ per unit depending on automation, monitoring, and environmental protection features.
- High-end telecom DC distribution units: \$1,000–\$3,000 per unit for specialized cabinets like Huawei DCDU-12B with multiple outputs and subrack compatibility.

Recommendation

For an accurate unit price, it is best to contact manufacturers or distributors directly with your specifications, including voltage, amperage, number...
