

# What is the price range for optical splitters

## AI Overview

Optical splitters typically cost between \$20 and \$200, with price depending on type, splitting ratio, and quality. Typical Price Range Modern PLC (Planar Lightwave Circuit) optical splitters generally range from \$20 to \$200. Entry-level models suitable for small-scale or home deployments are at the lower end, while high-performance splitters for industrial or telecom applications can reach the upper end of this range. Prices vary based on the splitting ratio (e.g., 1:2, 1:4, 1:8, 1:16, 1:32, 1:64), insertion loss specifications, and manufacturing quality. Factors Influencing Cost Splitting Ratio: Higher ratios (splitting one input into many outputs) generally increase cost due to more complex design and higher insertion loss management. Performance Specifications: Premium splitters with low insertion loss, high signal uniformity, and environmental stability command higher prices. Brand and Reliability: Well-known brands like YOFC, Amphenol, TE Connectivity, and Senko offer reliable splitters with consistent performance, which may cost more but reduce maintenance and downtime. Customization: Options such as custom cable lengths, connector types, or specific splitter ratios can increase cost but provide better integration for specialized networks. Certifications: Compliance with industry standards (e.g., Telcordia GR-1209/1221, IEC) ensures tested performance and reliability, often reflected in higher prices. Affordability Considerations While optical splitters are not prohibitively expensive, investing in quality is recommended for network-critical applications. Cheaper splitters may save upfront costs but can lead to higher long-term expenses due to signal degradation, replacement, or downtime. For home or small business setups, low-cost splitters are generally sufficient, whereas enterprise or telecom networks benefit from premium models. Summary Optical splitters are moderately pr...
